**RE: Jackson Area Improvement Project
Construction Start & Lead Information Notice**

Dear Resident:

This letter is to inform you that the Village is finalizing preparations for the upcoming Jackson Area Improvement Project. Construction is tentatively expected to begin the week of **Monday, February 17, 2025**. Preliminary work, such as the stockpiling of equipment and materials, cutting of the pavement, and utility locating may begin sooner.

The project consists of roadway improvements on Addison Avenue from Madison Street to Washington Street, Wisconsin Avenue from Jackson Street to Washington Street, and Madison Street from Addison Avenue to Michigan Avenue. The project includes the installation of storm sewers. Some selective water system and sanitary sewer system improvements are also included. Project plans as well as general information can be found on the dedicated webpage located on the Village website: <https://www.invillapark.com/1089>.

PROJECT UPDATES

The Village uses a notification service called CodeRED to provide project updates, as well as information regarding notices about road closures, water shutoffs, driveway access restrictions, etc. These updates are provided in a variety of ways, including email, text messages, and the CodeRED mobile app. If you are interested in signing up for CodeRED please use the QR code to the left or follow the link to complete the process: <https://arcg.is/fiiHG>

ROAD ACCESS, DRIVEWAY ACCESS, AND PARKING

Traffic within the project area will be affected by construction efforts. **Parking will not be permitted in active construction areas during the workday.** In addition, temporary road closures and/or driveway access restrictions may be needed during portions of the construction. Advanced notice will be provided before any multi day closures via letters and the CodeRED notification system. Efforts will be made to give residents access to their driveways overnight as much as possible during the project. **During any closures and/or access restrictions, residents will be allowed to park overnight on adjacent streets, where normally permitted.** We ask that motorists follow all posted signs.

WATER SHUT-OFFS

Portions of the work to be completed with this project will require the water service to be temporarily shut off for periods of time. These water service shut-offs will take place Monday through Friday during normal working hours and will be kept as brief as possible. The exact

PLEASE SEE REVERSE

dates and times will vary, and additional advanced notice will be provided via letters and the CodeRED notification system before any scheduled water shut-offs occur. If you experience a pressure loss after a water shut-off, please contact the Public Works Department at (630) 834-8505 to report the issue.

LEAD CONCERNS

Village water mains are generally constructed of ductile or cast iron. Water services and interior plumbing, including joints and fittings, can be composed of lead, copper, or galvanized pipe. With the age of the buildings in the project area, it is possible that some water service lines or the interior plumbing in your home could contain lead.

If the Village encounters any lead water services during construction, the Village will replace the public portion of the water service between the water main and the buffalo box (b-box). If, at this same time, the private side of the water service between the buffalo box (b-box) and the meter is determined to be lead, the Village will contact the homeowner to discuss replacement options for this portion.

More information on lead in drinking water can be found on the enclosed paperwork and on the IEPA website at <http://www.epa.illinois.gov/citizens/citizens-information/in-your-home/resources-on-lead/index>.

SUMMARY AND FREQUENTLY ASKED QUESTIONS

- Construction is expected to begin the week of February 17, 2025, and is tentatively expected to be substantially complete by the end of 2025.
- The project area consists of South Addison Avenue from Madison to Washington, South Wisconsin Avenue from Jackson to Washington, and West Madison Street from Addison to Michigan.
- A new separated storm sewer will be installed.
- Some parkway trees will unfortunately need to be removed to install the new infrastructure.
- Residents should maintain driveway access for most of the time construction is taking place. Temporary loss of access for brief periods may happen while work is taking place directly in front of properties. If a vehicle is needed to make a scheduled appointment or event, it is recommended to park that vehicle on the street outside of the construction area ahead of time to ensure there are no delays.
- Street parking will not be permitted within the project area from 6:00 AM to 5:00 PM.
- Notices for temporary water shutoffs and loss of driveway access will be delivered via the CodeRED messaging system as well as paper letters via plastic door hangers.
- Weather may affect the date and time of any pre-planned construction activity.
- Weekly project status updates will be provided exclusively via the CodeRED messaging system.
- The primary contractor for this project is Trine Construction Corp, of St Charles, IL

If you have any questions or would like additional information, please do not hesitate to contact the engineering division by email at engineering@invillapark.com or by phone at (630) 834-8505 between the hours of 7:30 a.m. to 4:00 p.m.

Lead Informational Notice

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Our water system will soon begin a water line maintenance and/or construction project that may affect the lead concentrations in your drinking water. Lead, a metal found in natural deposits, is harmful to human health, especially young children, and pregnant women. It can cause damage to the brain and kidneys and can interfere with the production of red blood cells that can carry oxygen to all parts of your body. The most common exposure to lead is swallowing or breathing in lead paint chips and dust. However, lead in drinking water can also be a source of lead exposure. In the past, lead was used in some water service lines and household plumbing materials. Lead in water usually occurs through corrosion of plumbing products containing lead; however, disruption (construction or maintenance) of lead service lines may also temporarily increase lead levels in the water supply. This disruption may be sometimes caused by water main maintenance/replacement.

The purpose of this notice is for informational purposes only. While it's not known for certain whether this construction project will adversely affect the lead (if present) plumbing in and outside your home, below describes some information about the project and some preventative measures you can take to help reduce the amount of lead in drinking water.

Project Start Date: 2/17/2025 Project expected to be completed by: 3/1/2026

Project location and description: _____

South Addison Ave from Madison to Washington, South Wisconsin Ave from Jackson to Washington, and West Madison Street from Addison to Michigan. The separation of the existing combined sewer, with the installation of a new storm sewer.

What you can do to reduce lead exposure in drinking water during this construction project:

- *Run your water to flush out lead.* If the plumbing in your home is accessible; you may be able to inspect your own plumbing to determine whether you have a lead service line or lead solder. Otherwise, you will most likely have to hire a plumber.
 - If you do not have a lead service line, running the water for 1 – 2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking, and preparing baby formula throughout the day.
 - If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably. Flushing for at least 3 – 5 minutes is recommended.
- *Use cold water for drinking, cooking, and preparing baby formula.* Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.
- *Look for alternative sources or treatment of water.* You may want to consider purchasing bottled water or a water filter that is certified to remove "total lead".
- *Clean and remove any debris from faucet aerators on a regular basis.*
- *Do not boil water to remove lead. Boiling water will not reduce lead.*
- *Purchase lead-free faucets and plumbing components.*
- *Remove the entire lead service line.*
- *Test your water for lead.* Call us at: (630) 834-8505 to find out how to get your water tested for lead. While we do not do the testing, we can provide a list of laboratories certified to do the testing. Laboratories will send you the bottles for sample collection. Please note that we are not affiliated with any laboratory, and they will charge you a fee.
 - If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants.

Lead Informational Notice

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Dear Water Customer:

Today's Date: 2/5/2025

This notice contains important information about your water service and may affect your rights. We encourage you to have this notice translated in full into a language you understand and before you make any decisions that may be required under this notice.

Diese Mitteilung beinhaltet wichtige Informationen über Ihre Wasserversorgung und könnte Ihre Rechte beeinflussen. Wir bitten Sie, dass Sie diese Mitteilung vollständig in eine Sprache übersetzen lassen, die Sie verstehen, bevor Sie eventuelle Entscheidungen treffen, welche im Zusammenhang mit dieser Benachrichtigung erforderlich sind.
